

Managed Secure Access

Ubiquitous Network Access

Your business stakeholders operate across diverse offices, locations and devices. With GTT, they can easily stay connected with secure, remote network access, anytime and anywhere.

Fully Managed, Backed by Expertise

GTT's Managed Secure Access offering is an expertly managed, completely turnkey solution that extends the reach of your network. We design, procure, implement, manage and monitor the service, minimizing your support costs, improving IT efficiency and reducing total cost of ownership. GTT is a leader in remote access and managed services, with over 60,000 managed services sites supported around the world and Managed Secure Access nodes in 22 countries.

Simple, Flexible Connectivity

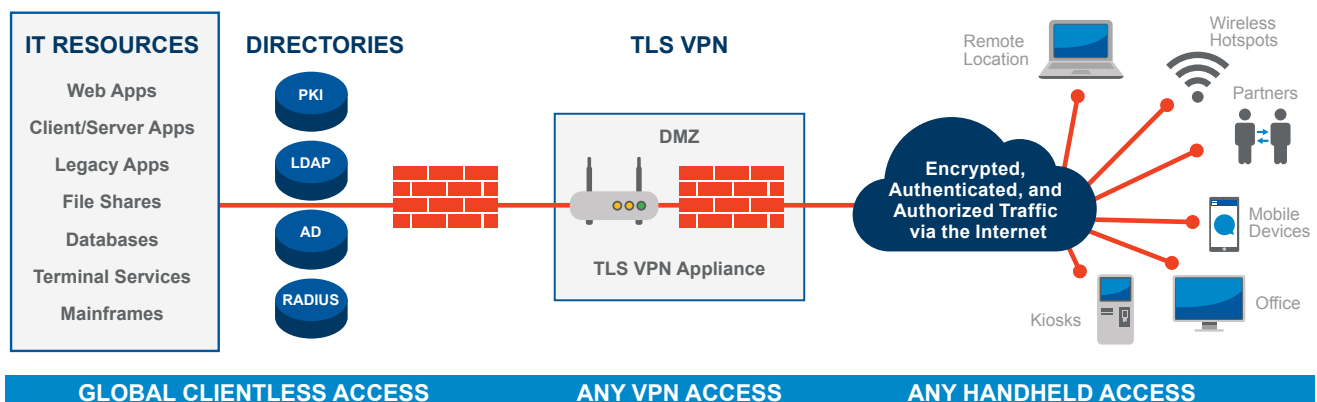

With GTT's Managed Secure Access, there's no software to install or maintain. Users only need an internet connection and assigned credentials to access any approved resource on the corporate LAN. You determine the access policies, and GTT does the rest.

Managed Secure Access can be used with any device or operating system. All traffic over the VPN is encrypted using Transport Layer Security (TLS) to protect it from unauthorized users. Access options include:

- Clientless, browser-based access for web applications and file sharing
- Clientless access to client/server applications using a session-based agent
- An easy-to-deploy VPN client for complete application access with additional network and desktop protection

Secure, Policy-based Connectivity

GTT's Managed Secure Access gives you complete control over access to corporate resources, using policies for each group of users and the devices they use to access the network. Policy zones are determined by user categories and the type of connected device – trusted versus untrusted – to restrict access to sensitive applications and information.

The GTT Advantage

Proven Expertise in Managed Secure Access

- Over 15 years of expertise in delivering remote access services
- 642,000+ unique user connections supported concurrently on a monthly basis
- Average of 820 terabytes of Managed Secure Access traffic traversing our equipment monthly
- Concise implementation time frame – average of 40 days
- Dedicated account manager for lifecycle of solution, from engagement to ongoing management and monitoring

Maximum Security and Reliability

- Transport Layer Security (TLS) protocol with AES encryption
- Customized access control policies
- Policy enforcement based on user, device and application/resource
- Average availability of 99.999%

Predictable IT Costs

- No capital investment required
- Reduced support costs and lower total cost of ownership
- Per-user subscription model

Monitoring & Support Management

- 24x7 operations management and proactive monitoring
- Configuration management and backup
- Detailed reporting for auditing and compliance
- Network validation testing

Superior Client Experience

- GTT is committed to providing superior client experience by living our core values of simplicity, speed and agility. Our technical experts are available 24x7 to respond to your service requests.

Key Benefits

- Take advantage of secure, remote VPN access, compatible across browsers, devices and locations
- Benefit from flexible connectivity via TLS or SSL, or IPsec with a managed router
- Easily scale with your changing business requirements with flexible licensing capabilities
- Better meet compliance requirements (PCI, HIPAA, SOX, etc.) through secure access
- Achieve business continuity through failover capabilities
